

Updating Your
*Bathroom
Vanity*

These days bathroom vanities come in an enormous variety of styles, for bathrooms of all different styles.

If your bathroom's in need of a makeover, adding a stylish new bathroom vanity set could work wonders at improving it's appearance. Modern bathroom vanities are not just built to look pretty, they are designed to be functional as well. A vanity unit can be custom built to make the best use of even the smallest bathrooms. For instance, vanities with a built-in base cabinet beneath the sink can provide valuable storage space to keep countertops clutter free, or a specially made unit could be fitted to a spare corner.

There are many options when it comes to considering a new vanity for your bathroom. The difficulty you might have is choosing which one would be just perfect for your needs. It helps to have a general idea of the style of your room. For instance, are your other bathroom fixtures traditional, contemporary or antique in look? Furniture style vanities are very popular, and come with a choice of decorative touches to add a touch of class to any bathroom, from arched skirts to Queen Ann legs. Think about the finish of the wood. Do you prefer glazed, painted or laminated finishes?

Bathroom vanity tops also come in a range of durable and attractive materials, from granite to marble. Don't forget to pay attention to smaller details such as the design of the

hardware. Try to coordinate it with your faucets and the handles on your shower doors and bathroom cabinets, for instance. The positioning of your bathroom's vanity lights and mirrors is also important, as this can have an influence over the look and feel of the whole room. There are lots of helpful hints and ideas available on the internet to give you inspiration for transforming your bathroom.

Well chosen bathroom vanities can become an attractive centerpiece and focal point of a room, instantly adding style and function without too much expense or effort. DYH
